

Amendments to the Claims:

This listing of claims will replace all prior versions and listings of claims in the application.

Listing of Claims:

1. (Previously Presented) A housing for fibre-optic plug connectors, comprising:
a housing body with the housing body having at least two housing parts, in which one end of a conductor cable can be positioned and the position of the conductor cable in the housing body can be secured, the conductor cable defining a longitudinal axis, wherein at least a first of the housing parts defines a first opening, wherein the first housing part includes a latching tab and is configured to be latched over the conductor cable through the first opening in a transverse direction to the longitudinal axis, wherein a second of the housing parts defines a second opening sized to receive the latching tab of the first housing part; and wherein the housing parts include a closure cap, wherein at least the closure cap is formed with an opening for latching onto the conductor cable, and the opening is in the form of a slot.
2. (Previously Presented) The housing as claimed in claim 1, wherein the conductor cable can be accommodated in the housing, with the end of the conductor cable being prefabricated at least with a ferrule.
3. (Previously Presented) The housing as claimed in claim 2, wherein a compression spring can be prestressed by the housing, the compression spring being mounted on the end of the conductor cable before the end of the conductor cable is positioned in the housing, and a position of the ferrule and of the conductor cable in the housing can be secured by the compression spring.
4. (Previously Presented) The housing as claimed in claim 1, wherein the housing parts can be connected via a latching connection.

5. (Currently Amended) The housing as claimed in ~~claim 1~~ claim 1, wherein the housing parts also include a plug housing, the closure cap ~~can~~ being configured be connected to the plug housing in a longitudinal direction of the conductor cable.

6. (Previously Presented) The housing as claimed in claim 5, wherein the closure cap has two latching tabs, and the plug housing has latching eyes which are complementary to the latching tabs.

7. (Previously Presented) The housing as claimed in claim 5, wherein the closure cap has a flange.

8. (Previously Presented) The housing as claimed in claim 1, wherein the housing forms an FC, MTRJ, SC, Duplex-SC, LC, E2000, ST or DIN plug.

9-13. (Canceled).

14. (Currently Amended) A housing for fibre-optic plug connectors, comprising:
a housing body with the housing body having at least two housing parts, in which one end of a conductor cable can be positioned and the position of the conductor cable in the housing body can be secured, the conductor cable defining a longitudinal axis, wherein at least one of the housing parts has an opening, and at least one housing part can be latched over the conductor cable through the opening in a transverse direction to the longitudinal axis;

wherein the housing parts include a plug housing and a closure cap, the closure cap being configured to ~~can~~ be connected to the plug housing in a longitudinal direction of the conductor cable, wherein at least the closure cap is formed with an opening for latching onto the conductor cable, and the opening is in the form of a slot.

15. (Currently Amended) The housing as claimed in claim 14, wherein the closure cap has two latching tabs, and the plug housing has latching eyes which are complementary to ~~them~~ the latching tabs.

16. (Previously Presented) The housing as claimed in claim 14, wherein the closure cap has a flange.

17. (Currently Amended) A method for laying fibre-optic cables, in which at least one end of a conductor cable is laid to a plug-in location, comprising:

positioning the end of the conductor cable in a first housing part of a housing, and
securing the position of the conductor cable in the first housing part by a second housing part of the housing, wherein at least one of the first and second housing parts, which has an opening, is latched over the conductor cable in a transverse direction to a longitudinal axis defined by the conductor-cable, cable;

wherein the first and second housing parts include a plug housing and a closure cap, with the closure cap having a slot and being latched onto the conductor cable, and the closure cap being connected to the plug housing in a longitudinal direction of the conductor cable.

18. (Previously Presented) A fiber optic plug connector comprising:

a plug housing having a first end and a second end, the plug housing defining a through opening extending from the first end to the second end, the through opening of the plug housing being configured to receive one end of a conductor cable having a longitudinal axis, the plug housing also defining first and second side openings on opposite sides of the plug housing; and
a cable cap configured to fit inside the through opening of the plug housing to secure the conductor cable to the plug housing, the cable cap defining a longitudinal slot extending from a first end of the cable cap to a second end of the cable cap, the slot being sized to enable passage of the conductor cable through the slot to enable the cable cap to mount to the conductor cable, the cable cap also defining first and second latching tabs protruding radially from the cable cap, the first and second latching tabs being configured to fit within the first and second openings, respectively, of the plug housing.
